Ultra White Pearl Bocce Blends

Traditionally Bocce Ball courts are covered with a 2 to 3 inch layer of crushed oyster flour spread that has been blended with decomposed granite in a very fine 1/4" minus screen size. After the installation of the playing surface has been done a layer of finely crushed oyster shell flour is often applied. We supply all of these materials for court installations and for seasonal maintenance. The role that oyster flour plays in bocce court surface mixtures is to keep the decomposed granite from binding together becoming extremely hard and unworkable for grooming. The oyster flour flakes keep decomposed granite from completely binding together. Our decomposed granite oyster flour blend is in traditional Italian bocce ball court surface formula. When groomed out it makes a smooth solid surface to play on. When play is completed it makes for an easy surface to quickly renovate.
